

SAMPLE API DOCUMENTATION

Beginner-level REST API documentation sample — fictional example

Portfolio sample by Simran

Important Note

This is a fictional portfolio example created to demonstrate API documentation structure. It is not documentation for a real production API.

1. Overview

The Employee Directory API allows an authorized application to retrieve basic employee directory information.

2. Base URL

`https://api.example.com/v1`

3. Authentication

Send an API key in the Authorization header.

Authorization: Bearer YOUR_API_KEY

4. Get an Employee

GET `/employees/{employee_id}`

Returns basic information for the employee identified by `employee_id`.

5. Path Parameter

Parameter	Type	Description
<code>employee_id</code>	string	Unique identifier of the employee.

6. Example Request

GET `/v1/employees/EMP1001`
Authorization: Bearer YOUR_API_KEY

7. Example Response

```
{  
  "id": "EMP1001",
```

```
{
  "name": "Example User",
  "department": "Operations",
  "status": "active"
}
```

8. Response Codes

Code	Meaning
200	Request successful
401	Authentication failed or API key missing
404	Employee not found
500	Unexpected server error

9. Example Error Response

```
{
  "error": "Employee not found",
  "code": 404
}
```
