

SAMPLE SOP: OFFICE REQUEST & COORDINATION PROCESS

Process documentation sample based on office-coordination responsibilities

Portfolio sample by Simran

1. Purpose

This SOP describes a simple, repeatable process for receiving, assigning, tracking, and closing routine internal office requests.

2. Scope

This process can be used for routine requests involving facilities, administrative support, meeting arrangements, supplies, and interdepartmental coordination.

3. Process

- Request submission: The requester provides the requirement, priority, requested completion date, and any supporting information.
- Initial review: The coordinator reviews the request for completeness and identifies the responsible department or person.
- Assignment: The request is assigned to the appropriate owner with a clear expected completion date.
- Follow-up: Open requests are reviewed regularly and blockers are communicated to the requester.
- Completion: The coordinator confirms completion and records the final status.
- Closure: Supporting documents or notes are stored in the appropriate location for future reference.

4. Status Definitions

Status	Meaning
New	Request received and awaiting review
In Progress	Request assigned and work has started
Blocked	Work cannot proceed until an issue is resolved
Completed	Requested work has been completed
Closed	Completion confirmed and records updated

5. Documentation Standards

- Use clear, concise language.

- Record dates, owners, and decisions consistently.
- Avoid duplicate records where possible.
- Keep sensitive information out of general process notes.
- Update the status whenever responsibility or progress changes.

6. Expected Outcome

A consistent request process improves visibility, reduces missed follow-ups, and makes routine coordination easier to track.
